

overtop. Drains and flap valves will be fitted to the existing wall to allow the area to drain naturally once the flood waters recede.

- W10 From the end of operation W09, approximately 10m upstream of the viaduct, dismantle existing riverside wall and construct approximately 10m of new floodwall generally 2.5m above the footpath level, tying into the viaduct or thereby as typically detailed at section 7 and as generally shown on the plan marked W/106/01. A new floodgate will be provided across Warriston Road at the upstream end of the new wall.
- W11 Minor remedial works may be required to public conveniences.
